Tempo

Tempo brings your venues to you. Our state-of-the-art route management tool offers a wide variety of tools that help increase operator efficiency by putting all of your jukeboxes in the palm of your hand.

Remote access and tools

Quickly and easily manage your TouchTunes route right from your desktop, tablet or smartphone. You can turn on, unpause, force a call to or reboot your jukeboxes remotely. You can even enter hours of operation to automate when your jukeboxes turn on, which can help maximize uptime and revenues while reducing service calls. Plus, new features and improvements are available to make your collection processes more efficient and streamlined.

Live jukebox status and alerts

Help boost your route revenues by reviewing your jukebox statuses in real-time. Confirm that your jukeboxes are performing as expected, and receive an alert when your locations are turned off / paused during prime time or are experiencing issues related to their systems, temperature, or revenue.

Control the music

Tempo includes filters that allow you to set the perfect vibe by choosing what music style, artist, or genre fits perfectly with your venue. Background music (CMP) and AUX can be scheduled to maximize earnings by keeping the music playing according to the location's preferences.

Check out TEMPO's powerful features and capabilities for managing your jukeboxes.

Reach out to your sales representative if you need a Tempo account or additional training!
